

# MEETING 11/19

## What we did:

- Ian: Fixed bug with map page, worked on search for plant species database, ran into database problems
- Maya: Worked on the page making plant info display, ran into database problems
- Felix: Working on populating map with data, but ran into same issue with tables as everyone else
- Mathias: implemented email verification
- Davion: worked on page for adding a plant log, database issues

Did troubleshooting for the database; tables not initializing despite being written in create.sql and successfully connecting on docker; need to go to office hours.

## To-do:

- Go to office hours with professor to get database fixed
- Meet as a team afterwards to discuss solutions
